Assignment 2,3,4 2026

Criteria	HD+	HD	DN	CR	PP	NN
House and Room Lists and Overall App Design 10 points	A list of houses is shown, and for each house a list of rooms is shown. The user can edit the details of a house and room, and sensible choices were made for this. The interface for this part is **highly** intuitive; provides a **consistent** look and feel across all screens and is aesthetically pleasing. Application never crashes and has been tested **thoroughly** to avoid the existence of bugs. The houses and rooms can be **filtered OR searched** in some way. **(HD+)** Application has an **app icon**.	A list of houses is shown, and for each house a list of rooms is shown. The user can edit the details of a house and room, and sensible choices were made for this. The interface for this part is **highly** intuitive; provides a **consistent** look and feel across all screens and is aesthetically pleasing. Application never crashes and has been tested **thoroughly** to avoid the existence of bugs. The houses and rooms can be **filtered OR searched** in some way.	A list of houses is shown, and for each house a list of rooms is shown. The user can edit the details of a house and room, and **sensible choices** were made for this. The interface for this part is **intuitive and aesthetically pleasing**. Application **never crashes**. There are only very **minor** bugs (if any).	A list of houses is shown, **and for each house a list of rooms is shown**. The user can **edit** the details of a house and room. The interface for this part is **somewhat intuitive**. There are only **some** bugs (if any) in the application and/or **rarely** crashes.	A **list of rooms** is shown, but there is **no grouping** of rooms into houses. The user can **edit** the details of a house and room, but there are **some problems** with this implementation. There are only **some bugs** (if any) in the application and/or **sometimes** crashes.	The application **fails** to compile OR **crashes** on start-up OR crashes **frequently**. The user is **unable** to view data.

Criteria	HD+	HD	DN	CR	PP	NN
House and Room	The user can add and delete rooms and	The user can add and delete rooms and	The user can add and delete rooms and houses in a way	The user can add and delete rooms and houses in a way	The user can **add and**	**Fails** to provide functionality for

Add/Delete 5 points	houses in a way that is failure-resistant and/or forgiving. The app doesn't allow invalid inputs. Deleting a house deletes all rooms within that house. The interface for this is **visually pleasing and intuitive**.	houses in a way that is failure-resistant and/or forgiving. The app doesn't allow invalid inputs. Deleting a house deletes all rooms within that house.	that is failure-resistant and/or forgiving. The app **doesn't allow invalid inputs**. Deleting a house deletes all rooms within that house. However, there are **some bugs** in the implementation.	that is **failure-resistant and/or forgiving**. However, there are **many bugs** in the implementation.	**delete** rooms and houses.	deleting or adding rooms or houses.

Criteria	**HD+**	**HD**	**DN**	**CR**	**PP**	**NN**
Floor/Window Space Measurement 15 points	The user is able to add, edit, and delete floor and window spaces and these interfaces are distinct from each other. Spaces are associated with rooms. A width and height for each space can be entered, and invalid inputs are handled. There are no bugs in the implementation. The interface for this	The user is able to add, edit, and delete floor and window spaces and these interfaces are distinct from each other. Spaces are associated with rooms. A width and height for each space can be entered, and invalid inputs are handled. There are **no bugs** in the implementation. The interface for this	The user is able to add, edit, and delete floor and window spaces **and these interfaces are distinct from each other**. Spaces are associated with rooms. A width and height for each space can be entered, and **invalid inputs** are handled. OR Would be **HD level**, but there are	The user is able to add, edit, and delete floor and window spaces and **sensible choices** have been made for this. Spaces are **associated** with rooms. A width and height for each space can be entered. OR Would be **DN level**, but there are some **bugs** in the	The user is able to **add, edit, and delete floor and window spaces**. A **width and height** for each space can be entered. OR Would be **CR level**, but there are some **bugs** in the implementation.	**Fails** to provide floor/window space functionality OR Functionality doesn't work properly due to **bugs**

	part of the application is efficient (in terms of Don Norman's design principles), and aesthetically pleasing.	part of the application is efficient (in terms of Don Norman's design principles), and **aesthetically pleasing**.	some **bugs** in the implementation.	implementation.		

Criteria	HD+	HD	DN	CR	PP	NN
Products - Selection 10 points	The user is able to browse products for a floor/window space. Only floor products are shown for floor spaces, and only window products are shown for window spaces. All product details from the assignment specification can be seen, however sensible choices for the product list have been made. Products are sourced from the provided Product API, and not hard-coded into the application. Products can be selected for each window/floor space and the interface for this part of the application is efficient (in terms of	The user is able to browse products for a floor/window space. Only floor products are shown for floor spaces, and only window products are shown for window spaces. All product details from the assignment specification can be seen, however sensible choices for the product list have been made. Products are sourced from the provided Product API, and not hard-coded into the application. Products can be selected for each window/floor space and the interface for this part of the application is **efficient** (in terms of	The user is able to browse products for a floor/window space. **Only** floor products are shown for floor spaces, and only window products are shown for window spaces. **All product details** from the assignment specification can be seen, however sensible choices for the product list have been made. Products are **sourced from the provided Product API**, and not hard-coded into the application. Products can be selected for each window/floor space. There are **no bugs** in the implementation.	The user is able to browse products for a floor/window space. Most **product details** from the assignment specification can be seen, however **sensible choices** for the product list have been made. Products can be selected for each window/floor space. OR Would be **DN level**, but there are some **bugs** in the implementation.	The user is able to **browse products** for a floor/window space. Most **product details** from the assignment specification can be seen. Products can be **selected** for each window/floor space. OR Would be **CR level**, but there are some **bugs** in the implementation.	**Fails** to implement any substantial product functionality, or there are **many** bugs in the implementation.

	Don Norman's design principles), and aesthetically pleasing. There are no bugs in the implementation.	Don Norman's design principles), and **aesthetically pleasing**. There are no bugs in the implementation.				
Products - Constraints 10 points	The user is prevented from selecting a product for a window space that is not compatible with ALL of the constraints listed on the assignment specification: • Min/Max Height • Min/Max Width • Panel Splitting (while still respecting Min/Max Width) • Panel Count The application provides correct detail on why a product cannot be selected for a given window space. The interface for this functionality is **really** intuitive, failure-resistant, and visually pleasing.	The user is prevented from selecting a product for a window space that is not compatible with ALL of the constraints listed on the assignment specification: • Min/Max Height • Min/Max Width • Panel Splitting (while still respecting Min/Max Width) • Panel Count The application provides correct detail on why a product cannot be selected for a given window space. The interface for this functionality is **intuitive, failure-resistant, and visually pleasing**.	The user is prevented from selecting a product for a window space that is not compatible with **ALL of the constraints** listed on the assignment specification: • Min/Max Height • Min/Max Width • Panel Splitting (while still respecting Min/Max Width) • Panel Count The application provides **correct detail** on why a product cannot be selected for a given window space.	The user is prevented from selecting a product for a window space that is not compatible with **MOST of the constraints** listed on the assignment specification: • Min/Max Height • Min/Max Width • Panel Splitting (while still respecting Min/Max Width) • Panel Count OR Would be **DN level**, but there are some **bugs** in the implementation.	The user is prevented from selecting a product for a window space that is not compatible with **ONE of the constraints** listed on the assignment specification: • Min/Max Height • Min/Max Width • Panel Splitting (while still respecting Min/Max Width) • Panel Count OR Would be **CR level**, but there are some **bugs** in the implementation.	**Fails** to implement constraints, or there are **many bugs** in the implementation.

Criteria	HD+	HD	DN	CR	PP	NN
Data Persistence 15 points	All data entered by the user persists between runs of the application. There are **no noticeable bugs** with the persistence. The application functions when there is no data in the database.	All data entered by the user persists between runs of the application. There are **no noticeable bugs** with the persistence. The application functions when there is no data in the database.	All data entered by the user persists between runs of the application. The application functions when there is no data in the database.	Most data entered by the user persists between runs of the application. There are only some bugs (if any) where some data does not save. The application functions when there is no data in the database.	**Most** data entered by the user persists between runs of the application. There are only **some bugs** (if any) where some data does not save. The application **functions** when there is **no data** in the database.	Data **fails** to persist when the application is closed and re-opened.

Criteria	HD+	HD	DN	CR	PP	NN
Camera 10 points	The application allows you to choose a photo from the phone's image gallery or camera and add it to a room or window/floor space record. The image is displayed on the screen after the user selected the image and throughout the rest of the app in a sensible way. The image data	The application allows you to choose a photo from the phone's image gallery or camera and add it to a room or window/floor space record. The image is displayed on the screen after the user selected the image and throughout the rest of the app in a sensible way. The image data	The application allows you to choose a photo from the phone's image gallery or camera and add it to a room or window/floor space record. The image is displayed on the screen after the user selected the image and **throughout the rest of the app** in a sensible way. The image	The application allows you to choose a photo from the phone's image gallery or camera and **add it to a room or window/floor space record**. The image is displayed on the screen after the user selected the image, but the image does not persist between runs of the app.	The application allows you to choose a **photo** from the phone's image gallery or camera and **display it somewhere in the app** (not necessarily on a room or window/floor space record). The image is **displayed** on the screen after the user selected the image, but the image **does not persist** between runs of the app.	The application **fails** to include camera functionality OR The camera functionality **crashes** the app when triggered.

	persists between runs of the application. There are no bugs with the camera functionality. **(HD+)** Options for **BOTH** Camera and Gallery selection are provided (ignore this requirement for Assignment 3 iOS).	persists between runs of the application. There are **no bugs** with the camera functionality.	data **persists** between runs of the application. There are **some bugs** with the camera functionality.			

Criteria	HD+	HD	DN	CR	PP	NN
Sharing 5 points	The application allows you to use the OS' built-in sharing functionality to share a text version of the itemized quote. Each relevant details and calculated costs are included. **(HD+)** The text is in CSV format such that it could be displayed in Excel for example.	The application allows you to use the OS' built-in sharing functionality to share a **text version of the itemized quote**. Each relevant details and calculated costs are included.	The application allows you to use the OS' built-in sharing functionality to share some **data from the app** (either a single house/room/space record). There are **no** bugs with this implementation.	The application allows you to use the OS' built-in sharing functionality to share some **data from the app** (either a single house/room/space record). There are **some** bugs with this implementation.	The application allows you to use the OS' built-in sharing functionality to share **something within the app**.	The application **fails** to include sharing functionality OR The sharing functionality **crashes** the app when triggered.

Criteria	HD+	HD	DN	CR	PP	NN
Quote Display 10 points	The user is able to view an itemised quote for a house, showing a total cost, the cost per room, and cost per window/floor space. The product for each window/floor space is correctly shown, including the measurement and the variant selected. Information is shown in a concise way that makes effective use of screen realestate. Users can filter out rooms from the quote, and the calculated totals reflect this immediately. There are no bugs in the implementation. The interface for this part is **really** forgiving, efficient, and visually pleasing.	The user is able to view an itemised quote for a house, showing a total cost, the cost per room, and cost per window/floor space. The product for each window/floor space is correctly shown, including the measurement and the variant selected. Information is shown in a concise way that makes effective use of screen realestate. Users can filter out rooms from the quote, and the calculated totals reflect this immediately. There are no bugs in the implementation. The interface for this part is **forgiving, efficient, and visually pleasing.**	The user is able to view an itemised quote for a house, showing a **total cost, the cost per room**, and cost per window/floor space. The product for each window/floor space is correctly shown, including the measurement and the **variant** selected. Information is shown in a concise way that makes effective use of screen realestate. Users can **filter** out rooms from the quote, and the calculated totals reflect this immediately. There are **no bugs** in the implementation.	The user is able to view an itemised quote for a house, showing a **cost per window/floor space**. The product for each window/floor space is correctly shown, including the **measurement**. Information is shown in a **concise way** that makes effective use of screen realestate. OR Would be **DN level**, but there are **some bugs** in the implementation.	The user is able to view an itemised quote for a house, showing a **cost per window/floor space**. The product for each window/floor space is correctly shown. OR Would be **CR level**, but there are **some bugs** in the implementation.	**Fails** to provide any quote display functionality or any correct cost calculations.
Custom Feature	The chosen custom feature is very suitable for the assignment	The chosen custom feature is very suitable for the assignment	The chosen custom feature is suitable for	The chosen custom feature is **suitable** for	A **custom feature** has been chosen, or a **CR+** level custom feature has	**Fails** to implement a custom feature is
